

Prepare the right application data

Complete this checklist before requesting a recommendation. Photos and the current belt specification are helpful whenever available.

Conveyed product and process

☐	Product handled	Material, dimensions, unit weight and contact condition
☐	Capacity	Units or mass per hour, loading pattern and accumulation
☐	Process action	Conveying, positioning, cooling, washing, inspection or other

Conveyor and drive

☐	Dimensions	Belt width, center distance and overall layout
☐	Pulleys	Diameters, drive location, take-up and knife-edge details
☐	Operation	Speed, direction, starts per hour and running schedule

Environment and performance

☐	Environment	Minimum/maximum temperature, humidity, dust, water or oils
☐	Cleaning	Method, frequency, temperature and cleaning agents
☐	Required behavior	Grip, release, tracking, low noise, static control or visibility
☐	Compliance	List any applicable hygiene, fire or plant-specific requirements

Send with your request: conveyor photos, a simple layout drawing, current belt markings and a brief description of the problem to solve.
